      ⎢          ⎥
      ⎣    ?     ⎦
```
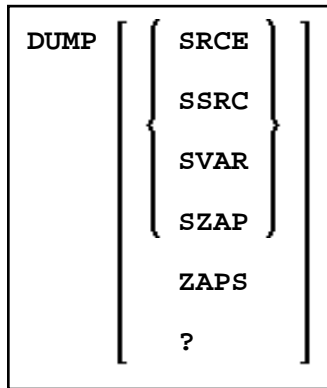

This command is used to provide information for Software AG technical support personnel in order to locate an error that caused an abnormal termination (abend) of the Natural system. Forward this information to Software AG technical support for error diagnosis and correction.

DUMP	Displays abend information (core contents).
DUMP SRCE	Displays the inventory of source changes applied per product.
DUMP SSRC	Displays the inventory of special source changes applied per product.
DUMP SVAR	Displays TP monitor and operating system dependent system variables and additional information.
DUMP SZAP	Displays a list of all special Zaps applied.
DUMP ZAPS	Displays a list of all Zaps applied.
DUMP ?	The DUMP command provides several other options (as explained on the help screens you get when you enter a question mark (?) on the DUMP menu). If necessary for error diagnosis, Software AG technical support personnel will tell you when and how to use these options.
