

# TEST

TEST	[	{	ON	}	]
			OFF		
			<i>debugger-commands</i>		

This command is used to invoke the debugger.

<b>TEST</b>	If you enter the system command TEST without parameters, the main menu of the debugger is displayed.
<b>TEST ON</b>	Activates the test mode of the debugger.
<b>TEST OFF</b>	Deactivates the test mode of the debugger.
<i>debugger-commands</i>	The direct commands that execute debug functions are explained in the section <i>Command Summary and Syntax</i> in the <i>Debugger</i> documentation.

To invoke the debugger from any point in an application, you can also use the terminal command %<TEST.

For further information, see the *Debugger* documentation.

The *Utilities* documentation also contains information on other Natural utilities used for online testing and monitoring.

## Note Concerning Natural Single Point of Development:

This command is for mainframes only. If a user has written a program called TEST, then Natural will execute that program when this command is issued in a Windows (or UNIX or OpenVMS) local environment. If there is an active connection to a development server on a mainframe, the mainframe utility TEST is invoked when this command is issued under Natural for Windows.
