

%P - Capture Screen Sequence

With this command, you activate the NATPAGE screen paging utility to capture the current screen and all subsequent screens. See also *NATPAGE Utility - Screen Capturing*.

The maximum number of screens that can be captured is determined by the session parameter PD. If this number is exceeded, each additional screen will overwrite one that has already been captured, beginning with the one captured first.

All screens that have been captured with previous %P and %I commands will be deleted when you issue a %P command.

To display screens that have been captured, you use the terminal command %E.

See also the terminal commands %E, %I, %O and %S.

Application Programming Interface: USR0350N. See *SYSEXT - Natural Application Programming Interfaces* in the *Utilities* documentation.
