%T*ll*/*cc* - Position Cursor to Line *ll*, Column *cc*

> **%T***ll*/*cc*

This command positions the cursor at line *ll*, column *cc* on the next screen output.

The line and column positions are counted beginning with 1 within the current logical page. For this reason, the message line, the function-key lines, and the statistics line/infoline (if active) are not taken into account for the cursor position; that is, `%T1/1` always positions to the beginning of the topmost data line of the page (if visible).

You have to execute the terminal command `%T+` before you can place the cursor at any desired position on the screen.
