

After-Open Event

This chapter covers the following topics:

- Applies To
 - Description
-

Applies To

Dialog.

Description

This event handler section is performed after the dialog with all child dialog elements has been created and displayed. You can use it, for example, to create dialog elements dynamically by using the `ADD` action of the `PROCESS GUI` statement in its event handler code. You can also use it to add items to list box controls or selection-box controls with the corresponding `PROCESS GUI` statement action.
