

MENU-ITEM-OLE

Determines whether a top-level menu item or a submenu control represents the OLE Container or File or Window group or not. If a dialog has a menu bar and an OLE container control is being edited in-place, the submenus of the OLE server application are merged into the Natural menu bar. The Natural contribution to the merged menu consists of the submenu controls called File, Container, and Window, depending on what you set with this attribute. The server application's contribution are the submenu controls called Edit, Object, and Help.

Applies to	Menu item, submenu control.
Data Type	I4
Default Value	MO-NORMAL

Possible Values

MO-NORMAL	No OLE menu item.
MO-NORMAL	No OLE menu item.
MO-CONTAINER	OLE Container group.
MO-FILE	OLE File group.
