

# ADD Action

This chapter covers the following topics:

- Description
  - Parameters for the ADD WITH option
- 

## Description

Creates a single specified dialog element dynamically. See also *Creating/Deleting Dialog Elements Dynamically* in the section *Event-Driven Programming Techniques* documentation. This action is most frequently used to add items to a List Box Control or to a Selection Box Control or to add column specifications to a table. It can also be used to create all kinds of dialog elements dynamically.

There are two syntax options of this action:

### **PROCESS GUI ACTION ADD WITH...**

This option has the parameters as listed below. Other attributes of the newly created dialog element have to be set in the global attributes list before the PROCESS GUI statement.

### **PROCESS GUI ACTION ADD WITH PARAMETERS... END-PARAMETERS**

This option accepts a list of attribute assignments, one for each attribute that is to be specified for the newly created dialog element. If you use this option, the global attribute list is not used or affected. For all attributes that are not explicitly specified, the default value is taken.

## Parameters for the ADD WITH option

Name/Data Type	Explanation
HANDLE OF GUI	Input  The handle of the parent dialog element.
Type (I4)	Input  The type of dialog element to be created.
HANDLE OF GUI	Output  The handle of the newly created dialog element.
Response (I4)	Output  Natural error (if applicable).

**Example 1 (option 1):**

```

DEFINE DATA LOCAL
1 #NEW1 HANDLE OF INPUTFIELD
END-DEFINE
...
#NEW1.STRING:= 'NEW1'
#NEW1.RECTANGLE-X:= 24
#NEW1.RECTANGLE-Y:= 30
#NEW1.RECTANGLE-W:= 176
#NEW1.RECTANGLE-H:= 28
#NEW1.ENABLED:= TRUE
#NEW1.VISIBLE:= TRUE
PROCESS GUI ACTION ADD WITH #DLG$WINDOW INPUTFIELD #NEW1

```

**Example 2 (option 2):**

```

DEFINE DATA LOCAL
1 #NEW2 HANDLE OF INPUTFIELD
END-DEFINE
...
PROCESS GUI ACTION ADD WITH PARAMETERS
  HANDLE-VARIABLE = #NEW2
  TYPE = INPUTFIELD
  STRING = 'NEW2'
  RECTANGLE-X = 24
  RECTANGLE-Y = 30
  RECTANGLE-W = 176
  RECTANGLE-H = 28
  ENABLED = TRUE
  VISIBLE = TRUE
  PARENT = #DLG$WINDOW
END-PARAMETERS

```

If you insert a new dialog element dynamically by using the ADD action, you determine its position in the navigation sequence by creating the dialog element and setting the SUCCESSOR attribute to the handle value of its successor.

**Example:**

```

/* Insert Input Field Control #NEW1 before push button control #PB-1
/* Be careful not to trigger the PROCESS GUI statement action from a push
/* button control named #PB-1 because you are already defining it
DEFINE DATA LOCAL
1 #NEW1 HANDLE OF INPUTFIELD
1 #PB-1 HANDLE OF PUSHBUTTON
END-DEFINE
...
PROCESS GUI ACTION ADD WITH PARAMETERS
  PARENT = #DLG$WINDOW
  HANDLE-VARIABLE = #NEW1
  TYPE = INPUTFIELD
  SUCCESSOR = #PB-1
  ...
END-PARAMETERS

```
