STATUS-HANDLE

Specifies the status bar control (if any) which is to receive output in the case where no status bar control handle is explicitly specified (for example, when the STATUS-TEXT attribute of the dialog is changed). If the value of this attribute is NULL-HANDLE, the output will be sent to the implicit status bar (if any) that is created when the dialog's HAS-STATUS-BAR attribute is set to TRUE.

Applies to	Dialog (window, MDI frame, MDI child).
Data Type	HANDLE
Default Value	NULL-HANDLE
Possible Values	NULL-HANDLE / status bar control handle
