

# ZOOM-FACTOR

Magnifies or reduces the default representation of an OLE server object that has become visible in an OLE container control.

If you set this attribute to the value "0", the server application's object is scaled so that it fits into the OLE container control's rectangle. To avoid a distorted display, the OLE container control's rectangle should have a width/height ratio similar to that of the server object.

<b>Applies to</b>	OLE container control.
<b>Data Type</b>	I4
<b>Default Value</b>	100
<b>Possible Values</b>	0 to 500
