

Maintaining DDMs in Different Environments

This section briefly describes the Natural utilities that can be used, in addition to the clipboard functions provided with Natural Studio.

To transfer DDMs (for example, copy or move) between different libraries and system files, and to perform a DDM operation (for example, delete and find) in a different environment, you can use the Natural utility `SYSMAIN` (see the *Tools and Utilities* documentation).

To transfer DDMs between different hardware platforms (mainframes, UNIX, OpenVMS and Windows), you can use the Object Handler (see the *Tools and Utilities* documentation).
