Entries

Note:

For context-sensitive help on attribute entries, select the entry so it has the focus, and press F1.

Entry in Attributes Window	Represents
Available Context Menus	Shows the context menus currently defined for this dialog. One or more context menus can be selected from this list.
New	Creates a new, empty, context menu with a default name. The new context menu is inserted into the list immediately after the selected context menu(s).
Cut	Cuts the selected context menu(s) to the clipboard.
Paste	Pastes context menu(s) from the clipboard, which are inserted into the list immediately after the selected context menu(s).
Selected Context Menu	Shows information relating to the currently selected context menu. If multiple context menus are selected, this section is disabled.
Name	Displays the name of the currently selected context menu, which can be modified here or in the Menu Editor Window itself.
Enabled	The initial ENABLED attribute state for the context menu. A disabled context menu is suppressed at run-time.
Edit	Invokes the menu editor for the selected context menu, where the menu items themselves can be defined.
Events	Invokes the event handler window for editing the events for the context menu itself. (The events for the menu items and any submenus are accessed using the Menu Editor Window).
OK	Save settings and exit the window.
Cancel	Exit the window without saving the settings.
Help	Provides online help on the attributes window.
