

Import Data Field

▶ Accessible Using

- "Insert > Import > Input Field/Selection Box".
-

Purpose

Create an input field control or a selection box control based on a data field from another Natural object in another Natural library. The dialog element is created with a linked variable as the source of its STRING attribute value. You must declare this linked variable in a data area of the dialog.

Entries

Entry	Function
Library	Selection box where you can select the library containing the Natural object with the data field of your choice.
Type	Mutually exclusive options for Natural object types.
Object List	Once you have chosen a library and an object type, all objects with these criteria will be displayed here.
Data fields	Once you have chosen an object from the object list, all data fields defined in this object will be displayed.
Import	Once you have chosen one or several data field(s), you push this button and its content will be imported into your input field control or selection box control.
Cancel	Exits the dialog box without saving the settings.
Help	Provides online help.
