

About this Documentation

This documentation describes all functions and aspects of usage of Natural Security. It applies to Natural Security on all supported platforms.

This documentation is intended for users of Natural Security, that is, users who are to be defined in Natural Security as users of type ADMINISTRATOR. The reader is assumed to be familiar with and have a good general understanding of Natural.

•	Structure And Terminology Of Natural Security	Basic concepts of Natural Security.
•	Natural Security On Different Platforms	Considerations for the use of Natural Security on different platforms, and the differences between these platforms.
•	First Steps After the Installation	Steps which have to be performed after Natural Security has been installed for the first time.
•	Logging On	Rules that apply when a user logs on to Natural under Natural Security.
•	Finding Your Way In Natural Security	Various aspects of handling the Natural Security user interface.
•	Administrator Services	Descriptions of the functions of the Administrator Services section of Natural Security.
•	User Maintenance	User security profiles, their components, and the functions used to create and maintain them.
•	Library Maintenance	Library security profiles, their components, and the functions used to create and maintain them.
•	Protecting Libraries	How to control the access of users to protected libraries.
•	Protecting Environments	How to make library protection environment-specific.
•	Protecting DDMs On Mainframes	How to control the use of DDMs on mainframe computers.
•	Protecting DDMs On UNIX, OpenVMS And Windows	How to control the use of DDMs on UNIX, OpenVMS and Windows.
•	Protecting Utilities	How to control the use of Natural utilities.
•	Protecting the Natural Development Server Environment and Applications	How to control the use of the Natural Development Server environment, and Natural Development Server base applications and compound applications.
•	Protecting the Natural for Eclipse Environment	How to control the use of the server and navigator views used by Natural for Eclipse.
•	Protecting Natural RPC Servers and Services	How to control the use of Natural remote procedure calls in a client/server environment.
•	Protecting External Objects	How to control the use of external objects.
•	Mailboxes	How to create, maintain and use mailboxes.

	Retrieval	How to review the existing security profile definitions and their effects.
	Countersignatures	How Natural Security administrators control each other.
	Functional Security	How to restrict the availability of functions and make different functions available for different users.
	Natural Security In Batch Mode	How to use Natural Security in batch mode.
	Transferring Security Data To Another System File	How to transfer Natural Security data from one system file to another.
	User Exits	Information on the available user exits.
	Application Programming Interfaces	The subprograms for performing Natural Security functions from outside the Natural Security library SYSSEC.
	Add-On Products And Plug-Ins	Considerations for the protection of various add-on products and plug-ins.

For information on how to install Natural Security, see the Natural *Installation* documentation.

For information on changes, enhancements and new features provided with the current version, see the Natural *Release Notes*.

Warning:

If you have multiple versions of Natural Security on a shared FSEC system file, you should use only the latest version for the maintenance of your security data. If you maintain the data with an older version, the consistency of the data cannot be guaranteed, particularly as far as items introduced with later versions are concerned.
