

FC - Filler Character for INPUT Statement

This Natural profile parameter is used to specify the default filler character to be used for fields displayed by an INPUT statement.

Possible settings	any character	Default filler character. It is used to pre-fill fields non-protected input fields (field attribute specification AD=A) when fields are written to a terminal by an INPUT statement. For modifiable input fields (field attribute specification AD=M), it is used to fill the rest of the field.
Default setting	blank	
Dynamic specification	yes	
Specification within session	no
