

# FC - Filler Character for INPUT Statement

This Natural profile parameter is used to specify the default filler character to be used for fields displayed by an `INPUT` statement.

<b>Possible settings</b>	any character	Default filler character.  It is used to pre-fill fields non-protected input fields (field attribute specification <code>AD=A</code> ) when fields are written to a terminal by an <code>INPUT</code> statement.  For modifiable input fields (field attribute specification <code>AD=M</code> ), it is used to fill the rest of the field.
<b>Default setting</b>	blank	
<b>Dynamic specification</b>	yes	
<b>Specification within session</b>	no
