

RPCSDIR - Library for Service Directory

This Natural profile parameter specifies the name of the Natural library (or one of its steplibs) used by the client at runtime. This parameter is evaluated by the *SYSRPC* utility functions Service Directory Maintenance and Server Command Execution.

RPCSDIR is specified on the client side only.

Possible settings	1 - 8 characters	Valid Natural library name.
Default setting	none	
Dynamic specification	yes	
Specification within session	no	

For further information on Natural RPC, see the *Natural Remote Procedure Call (RPC)* documentation.
