

SUBCHAR - Substitution Character for Default Code Page

This Natural profile parameter allows you to specify the substitution character for the default code page. The substitution character is automatically inserted whenever the conversion of a Unicode character into the current default code page (see profile parameter CP) fails and the profile parameter CPCVERR is set to "OFF".

Possible settings	<i>n</i>	Substitution character.
	OFF	If "OFF" is specified, the ICU default substitution character is used; for further information, see also <i>Profile Parameters</i> in the <i>Unicode and Code Page Support</i> documentation.
Default setting	OFF	
Dynamic specification	no	
Specification within session	no
