

Profile Settings

You can define an individual profile for your Object Handler utility by modifying the standard Object Handler user profile and specifying general or user-defined parameter settings, such as activating advanced-user mode by default, or specifying default settings for work files, report files and Workplans.

To invoke the profile option

1. In the **Welcome to the Natural Object Handler** window, from the **Options** menu, choose **Profile**.

The **SYSOBJH - Profile** window appears which provides all functions required for maintaining individual profiles.

2. Select the option(s) required and choose the **OK** command button to save your modifications.

The default is that the settings of the previous Object Handler session are used at session startup.

The Object Handler profile is stored as text file *SYSOBJH.PRU* in the following directory of the Natural Configuration Utility: *Local Configuration File\Installation Assignments\<Path to profile parameters>*.
