

Setting Up Your Development and Runtime Environment for Natural

Before you start coding, you have to make specific definitions in your Natural environment.

▶ To set up your Natural environment

- Set up your Natural development and runtime environment for the required platform as described in *Setting Up Your Environment* previously in this documentation.

This tutorial assumes that you use Natural Studio as your development environment.

Make sure to use the names mentioned below.

- **Development Environment**

Create a new Natural library with the name CISHELLO.

- **Runtime Environment**

When you add the new entry to the configuration file, specify "Execute samples" as the session name:

```
<session id="Execute samples" trace="false">
```

"Execute samples" is the entry that will later be available for selection in the logon page.

You can now proceed with the next exercise: *Creating the Natural Code*.
