

# CO - Compiler Output

This Natural profile and session parameter can be used to deactivate or reactivate the compiler operation-in-progress window wherein, by default, the code is displayed as it is processed by the compiler.

<b>Possible settings</b>	ON	A compiler listing is displayed in a special operation-in-progress window on the screen. This setting is useful in the event of a crash because the code display will stop at the position affected.  <b>Note:</b> This setting should be used only if actually needed, because it results in a significantly longer compilation time. Especially a CATALL command will take a rather long time to compile all objects.  CO=ON is not supported in batch mode.	
	OFF	Compiler operation-in-progress window off.	
<b>Default setting</b>	OFF		
<b>Dynamic specification</b>	yes		
<b>Specification within session</b>	yes	<b>Applicable statements:</b>	SET GLOBALS
		<b>Applicable command:</b>	GLOBALS
