

# SD - Time Delay between Two Screens

This Natural profile parameter can be used to delay the time related to screen output display. This is the time delay between two screens during a non-conversational write operation (see the Natural terminal command %N).

<b>Possible settings</b>	0 - 100	The unit for the specified setting is a tenth of a second, which means that SD=10 leads to a delay of one second.
<b>Default setting</b>	0	
<b>Dynamic specification</b>	no	
<b>Specification within session</b>	no
