

GC - Filler Character for Group Headers

With this session parameter, you specify the filler character which will appear on either side of a group heading produced by a DISPLAY statement across all field columns that belong to that group.

Unlike the FC parameter, which applies to individual columns, the GC parameter applies to headings across a group of columns.

| | | | |
|-------------------------------------|---------------|-------------------------------------|-------------------|
| Possible settings | any character | Filler character for group headers. | |
| Default setting | blank | | |
| Specification within session | yes | Applicable Statements: | DISPLAY FORMAT |
| | | Applicable Command: | None |

Example:

```
DISPLAY (GC=*)
```
