## RETRY

RETRY

This chapter covers the following topics:

- Function
- Restriction
- Example

Related Statements: ACCEPT/REJECT | AT BREAK | AT START OF DATA | AT END OF DATA | BACKOUT TRANSACTION | BEFORE BREAK PROCESSING | DELETE | END TRANSACTION | FIND | GET | GET SAME | GET TRANSACTION DATA | HISTOGRAM | LIMIT | PASSW | PERFORM BREAK PROCESSING | READ | STORE | UPDATE

Belongs to Function Group: Database Access and Update

## Function

The RETRY statement is used within an ON ERROR statement block (see ON ERROR statement). It is used to reattempt to obtain a record which is in hold status for another user.

When a record to be held is already in hold status for another user, Natural issues Error Message 3145. See also the session parameter WH (Wait for Record in Hold Status).

The RETRY statement must be placed in the object that causes the Error 3145.

For details on record hold logic, see the section Record Hold Logic in the Programming Guide.

## Restriction

This statement can only be used to access Adabas databases.

## Example

```
END TRANSACTION
  /*
 ON ERROR
   IF *ERROR-NR = 3145
     INPUT NO ERASE 10/1
           'RECORD IS IN HOLD' /
           'DO YOU WISH TO RETRY?' /
           #RETRY '(Y)ES OR (N)O?'
     IF #RETRY = 'Y'
       RETRY
     ELSE
       STOP
     END-IF
    END-IF
 END-ERROR
 /*
 AT END OF DATA
  WRITE NOTITLE *NUMBER 'RECORDS DELETED'
 END-ENDDATA
END-FIND
*
END
```
