Migrate Natural Web Interface SYSWEB to SYSWEB3

This section provides you with a step-by-step introduction on how to update your programs written for the Natural Web Interface (SYSWEB) to run with the new interface (SYSWEB3).

- 1. You have to use the new interface programs nww3* instead of the old nww* programs. Copy the appropriate programs to your HTTP server, and configure your HTTP server.
- 2. Adapt your nww3*.ini file settings.
- 3. Adapt external URLs to nww3* instead of nww*

Note:

It is possible to rename the nww3* interface programs - but the new interface programs will only work with Natural subprograms stowed with SYSWEB3 and the old interface programs will only work with Natural subprograms stowed with SYSWEB.

- 4. If you are running a Natural RPC server
 - On Windows or UNIX without Natural Security modify your steplib settings at NATPARM. Replace steplib SYSWEB with steplib SYSWEB3 (or use a new, different RPC server instead)
 - On mainframe systems without Natural Security modify your server startup logon from SYSWEB to SYSWEB3 (or use a new, different RPC server instead)
 - With Natural Security (all platforms) modify your steplib settings at Natural Security. Replace steplib SYSWEB with steplib SYSWEB3 (or use a new, different RPC server instead)
 - Check your EntireX Broker settings. You may have to expand your NUM-COMBUF, NUM-LONG-BUFFER, MAX-MSG settings, depending on the maximum page length you want to transfer.
- 5. If you are running a DCOM server (Windows only),
 - Unregister your class (usually named according to your library name) first.
 - Delete your class (usually named according to your library name) and the associated LDA (usually named L)
 - Use the Web Interface plug-in and generate a new class for SYSWEB3 with a new LDA (new GUIs).
 - Register the new class.
- 6. Adapt URLs, read work files, templates, etc. to point to SYSWEB3 instead of SYSWEB.

Note:

If you rename SYSWEB3 to SYSWEB your application may work, but internal programs delivered with SYSWEB3 may not work correctly and may deliver wrong or unexpected results.

- 7. Recatalog all your programs that reference web interface programs by using SYSWEB3 as steplib instead of SYSWEB.
- 8. All your programs should now run the same way, they did with SYSWEB before.
