

Text to URL - Decoded

Subprogram Name	Source Name	Executable Example	Viewable Example
H3-TEXT-TO-URL H3-ASCII-URL-TABLE	H3TX2URL	E3TX2URL	E3TX2URL

Description

Converts a string to URL-decoded syntax. Useful if special characters are included. Use **W3-TEXT-TO-URL** instead of H3-TEXT-TO-URL. Use **W3-ASCII-URL-TABLE** instead of H3-ASCII-URL-TABLE.

The subprogram W3-ASCII-URL-TABLE will be called from H3-TEXT-TO-URL and contains a list of all conversations that will be made. This program can be changed and extended according to the user's needs.

Parameters

```
1 H3COUNT   (I4)      /* o/m : Length of the converted string
1 H3STRING   (A250)   /* io/m : URL-decoded text after conversion
```

How To Invoke

```
PERFORM H3-TEXT-TO-URL H3COUNT H3STRING
```
