

# CMPRINT - Batch Output File

This Natural profile parameter applies to batch mode only.

It is used to specify the batch output file for the output report resulting from DISPLAY, PRINT and WRITE statement in a Natural program. In addition, Natural commands from CMSYNIN and INPUT data from CMOBJIN are written to CMPRINT.

**Note:**

If the file name or path assigned to this parameter contains special characters (for example, backslash) or spaces, the entire string must be enclosed in double quotes, see example below.

<b>Possible settings</b>	any string	CMPRINT="node:[home.tmp]batch.out"
<b>Default setting</b>	none	
<b>Dynamic specification</b>	yes	
<b>Specification within session</b>	no
