

DD - Day Differential

This Natural profile parameter is used to adjust the current machine date (as read by using the internal machine time) by adding/subtracting any number of days to/from it. This makes it possible to re-run an application that was to be run at a certain date but for some reason could not be run at that date.

The DD profile parameter is specified as follows:

DD=+nn

or

DD=-nn

where *nn* is the number of days.

| | | |
|--|---------------------|---|
| Possible settings | -10953 to +10953 | Machine date is adjusted. Specification of "+" is optional. |
| | 0 | No adjustment is made. |
| Default setting | 0 | |
| Dynamic specification | yes | |
| Specification within session | no | |
| Application Programming Interface | USR1005N | See <i>SYSEXT - Natural Application Programming Interfaces</i> in the <i>Utilities</i> documentation. |
