ETID - Adabas User Identification

This Natural profile parameter is used as an identifier for Adabas-related information; for example, for identification of data stored as a result of an `END TRANSACTION` statement.

Possible settings	1 to 8 characters	The setting is used as the user ID setting in an Adabas open call.
		The Adabas user ID has its own syntax. Please consult your Adabas Command Reference Documentation if you want to use special characters for the setting of `ETID`.
	`OFF`	The `ETID` is set to ' ' (blanks), but Natural Security is allowed to set the `ETID`.
	' ' (blank)	The `ETID` is set to ' ' (blanks). This value is passed to Adabas on an open call without being modified by Natural Security.
	`$$`	The `ETID` is replaced by the process ID.
Default setting	' ' (blank)	
Dynamic specification	yes	
Specification within session	no	

If the `ETID` is not specified neither in `NATPARM` nor dynamically, Natural uses the setting of `*INIT-USER` to fill the `ETID`.

The `ETID` might also be used by Natural for work-file name generation. This might cause problems when running multiple instances on one machine or again, if special characters are used for the setting of `ETID`. Please refer to the Natural parameter `TMPSORTUNIQ` for a solution.
