

# GC - Filler Character for Group Headers

With this session parameter, you specify the filler character which will appear on either side of a group heading produced by a DISPLAY statement across all field columns that belong to that group.

Unlike the FC parameter, which applies to individual columns, the GC parameter applies to headings across a group of columns.

<b>Possible settings</b>	any character	Filler character for group headers.	
<b>Default setting</b>	blank		
<b>Specification within session</b>	yes	Applicable Statements:	DISPLAY FORMAT
		Applicable Command:	None

## Example:

```
DISPLAY (GC=*)
```
