

# STRUCT

<b>STRUCT</b> [( <i>n</i> )]
------------------------------

This command is used to perform structural indentation of the source code of the programming object currently in the work area of the editor.

<b>STRUCT</b>	By default (that is, if "( <i>n</i> )" is not specified), indentation is by 2 positions.	
<b>STRUCT</b> ( <i>n</i> )	<p>The parameter "(<i>n</i>)" may be supplied to specify the number of spaces used for indentation.</p> <p>Possible values: 1 - 9. Example:</p> <table border="1" style="margin-left: 20px;"> <tr> <td><b>STRUCT</b> ( 5 )</td> </tr> </table>	<b>STRUCT</b> ( 5 )
<b>STRUCT</b> ( 5 )		

The following types of statements are affected by the STRUCT command:

- processing loops (READ, FIND, FOR, etc.),
- conditional statement blocks (AT BREAK, IF, DECIDE FOR, etc.),
- DO/DOEND statement blocks,
- DEFINE DATA blocks,
- inline subroutines.

This chapter covers the following topics:

- Indentation of Source Code Lines

## Indentation of Source Code Lines

You can have a source program indented so that the indentation of source-code lines reflects the structure of the program.

### Note:

Indentation is performed differently for a reporting-mode program than for a structured-mode program.

### Partial Indentation

You can exclude sections of your program source from structural indentation by using the special statements /\*STRUCT OFF and /\*STRUCT ON. These must be entered at the beginning of a source-code line. The source-code lines between these two statements will remain as they are when you issue the STRUCT command.

## Example of Structural Indentation

Program before being structurally indented:

```
DEFINE DATA LOCAL
1 EMPL VIEW OF EMPLOYEES
2 PERSONNEL-ID
2 FULL-NAME
3 FIRST-NAME
3 NAME
1 VEHI VIEW OF VEHICLES
2 PERSONNEL-ID
2 MAKE
END-DEFINE
FIND EMPL WITH NAME = 'ADKINSON'
IF NO RECORDS FOUND
WRITE 'NO RECORD FOUND'
END-NOREC
FIND (1) VEHI WITH PERSONNEL-ID = EMPL.PERSONNEL-ID
DISPLAY EMPL.PERSONNEL-ID FULL-NAME MAKE
END-FIND
END-FIND
END
```

The same program after being structurally indented:

```
DEFINE DATA LOCAL
1 EMPL VIEW OF EMPLOYEES
    2 PERSONNEL-ID
    2 FULL-NAME
        3 FIRST-NAME
        3 NAME
1 VEHI VIEW OF VEHICLES
    2 PERSONNEL-ID
    2 MAKE
END-DEFINE
FIND EMPL WITH NAME = 'ADKINSON'
    IF NO RECORDS FOUND
        WRITE 'NO RECORD FOUND'
    END-NOREC
FIND (1) VEHI WITH PERSONNEL-ID = EMPL.PERSONNEL-ID
    DISPLAY EMPL.PERSONNEL-ID FULL-NAME MAKE
END-FIND
END-FIND
END
```
