

# **%Tll/cc - Position Cursor to Line ll, Column cc**

<code>%Tll/cc</code>
----------------------

This command positions the cursor at line *ll*, column *cc* on the next screen output.

The line and column positions are counted beginning with 1 within the current logical page. For this reason, the message line, the function-key lines, and the statistics line/infoline (if active) are not taken into account for the cursor position; that is, %T1 / 1 always positions to the beginning of the topmost data line of the page (if visible).

You have to execute the terminal command %T+ before you can place the cursor at any desired position on the screen.

%Tll/cc only works if there is an input field (session parameter AD=A or AD=M) at the specified position.
