SYSERR Utility

When you develop a Natural application, you may want to separate error or information messages from your Natural code and manage them separately. This makes it easy for you, for example, to standardize messages, to have predefined message ranges for different types of message, to translate messages into other languages or to attach to a message a long text that explains it in more detail.

The SYSERR utility provides the option to write application-specific messages. In addition, you can use the SYSERR utility to customize the texts of the existing Natural system messages.

The *SYSERR Utility* documentation is organized under the following headings:

●	General Information on Messages
●	Invoking SYSERR
●	Functions
●	Parameters
●	Direct Commands
●	Upper Case Conversion- ERRUPPER
●	Replacing Characters - ERRCHAR
●	Generating Message and Text Files
●	Managing Messages in Different Libraries
●	Application Programming Interface USR0020P
