Select Objects Select Objects

Select Objects

You can select the objects to be unloaded from a list. This selection list can also be used for other purposes such as listing the source of an object or deleting it.

The selection list is produced with the **Select objects** (or **Select**) function, which is provided on the object specification screen of the unload function when performed in advanced-user mode.

The selection list is displayed on a **List** screen, which is described in the following section.

Note:

The select function for Natural system error messages is described in the section *Select System Error Messages*.

Columns and Commands on List Screens

Columns and Commands on List Screens

The columns and commands provided on a **List** screen are explained in the following table.

The display of the columns contained on a **List** screen depends on the type of object selected from the **Select Unload Type** menu. The type of object processed is contained in the screen title, for example, **List Library Objects** or **List Command Processors**.

You can use the input fields below each column heading to start the list from a particular object or filter objects. Valid input values are mentioned in the table below.

Column	PF Key	Explanation		
Cmd		One of following line commands can be entered in the input field next to the object required:		
		L or Lists the source code of the object (not applicable to Natural command processor sources). For a user-defined error message: lists the short and the long texts of the error message.		
		S or Selects the object for subsequent unloading. SE UL or U Attention: Any of these commands only marks the object selected for subsequent processing. To execute the unload function, you need to choose PF2 (Unloa) described below.		
		DE Deletes the object.		
Name The object name. You can enter a name of Specification.		You can enter a name or a range of names: see <i>Name</i> in <i>Name</i> , <i>Date and Time</i>		
		For a user-defined error message, the message number and the language code is displayed. For example: 10 (Lang =1) denotes message number 10 in language 1 (English).		
Туре		The type of Natural library object such as Program. Valid input values are one or more object-type codes such as P for program. For a list of codes, see NATTYPE in the section <i>select-clause</i> .		

Column	PF Key	Explanat	ion	
S/C			d of Natural library object: by default, all source (S) objects and/or d (C) objects available are displayed on the screen.	
		Valid in	put values are one or more of the following codes:	
		S	Source objects only.	
		С	Cataloged objects only.	
		S/C	Both source and cataloged objects if both exist.	
		W	All STOWed objects: source and cataloged objects with identical date and time.	
		*	All source objects and/or cataloged objects.	
		For a us message	er-defined error message, this column contains the short text of the error	
M		The programming mode of the Natural library object. By default, any mode is displayed.		
		Valid inpu	at values are one or more of the following codes:	
		S Str	ructured mode only.	
		R Re	porting mode only.	
		* An	y mode, structured and/or reporting.	
		For a user message.	-defined error message, this column contains the short text of the error	
Version			ral version under which the Natural library object was saved and/or (range specification not possible).	
		For a user message.	-defined error message, this column contains the short text of the error	
User ID			the user who saved or cataloged the Natural library object. nter a single user ID or a range of user IDs: see <i>Name</i> .	
		For a user message.	-defined error message, this column contains the short text of the error	

PF Key	Explanation
	The date when the Natural library object was saved or cataloged. You can enter a date or a range of dates: see <i>Date</i> in <i>Name</i> , <i>Date and Time Specification</i> .
	For a user-defined error message, this column contains the short text of the error message.
	The time when the Natural library object was saved or cataloged. You can enter a time or a range of times: see <i>Time</i> in <i>Name</i> , <i>Date and Time Specification</i> .
	For a user-defined error message, this column contains the short text of the error message.
PF2	Starts unloading the objects selected for processing.
	As an alternative, in the Command line, you can enter either of the following direct commands:
	UNLOAD
	or UNLD
PF11	Marks all objects listed for subsequent unloading with PF2.
	As an alternative, in the Command line, enter either of the following direct commands:
	SELECT ALL or SEL ALL
	PF2
