

Use Selection or List Workplan

This option is used to specify a Workplan of the type SELECTION or LIST. These Workplans specify selection criteria for the objects to be processed. See also the section *Workplans*.

The screen **Unload/Load/Scan Selection or List** provides the following fields and PF keys:

| Field | PF Key | Explanation |
|------------------------|--------|--|
| Name | PF4 | The name of the Workplan to be processed. |
| List Workplan | | Displays the contents of the Workplan specified in the Name field. |
| Select Workplan | PF5 | Displays a list of all Workplans available. See also <i>List the Available Workplans in the Workplan Library in Administration</i> . |
| Settings | PF7 | Invokes the Unload/Load/Scan Settings screen where you can specify option and parameter settings. See <i>Settings</i> . |
| Work file | PF11 | The name of the work file to be used for this function: see also Work file in <i>Natural Library Objects</i> . |
| | PF1 | |
