

EMBEDDED-OBJECT

The value of this attribute is the name of a Natural embedded object, which has the default file extension ".neo". When a value is assigned to an OLE container control's EMBEDDED-OBJECT attribute, Natural loads the embedded object into the container, discarding any previously loaded object. If the values of the SERVER-OBJECT and SERVER-PROGID attributes are set for the OLE container control, the value of the EMBEDDED-OBJECT attribute is removed.

Applies to	OLE container control.
Data Type	A253
Default Value	None
Possible Values	All file names (if a file name is specified without an extension, the extension ".neo" is added by default)
