

Delete-Row Event

This chapter covers the following topics:

- Applies To
 - Description
-

Applies To

Table Control.

Description

Occurs after the end user has deleted a row by selecting it and by pressing DEL or by calling "PROCESS GUI ACTION TABLE-DELETE-ROW...". The table control's STYLE attribute must have had the value "e" (extendable, allows end users to delete rows).

If this event occurs in a cell, the ROW and COLUMN attributes are modified so that they contain the position of the cell.
