

RTL

If this attribute is set, the dialog element direction is right-to-left. You can use this attribute to change the direction for elements which are designated for the input of characters from bidirectional languages.

This attribute has only an effect if both the Natural default code page and the Windows system code page are defined as bidirectional code page. If Natural does not define a specific code page, it is sufficient to have defined a bidirectional Windows system code page.

Applies to	Dialogs (all types), edit area control, group frame control, input field control, list box control, radio button control, scrollbar control, selection box control, table control, toggle button control.
Data Type	BOOLEAN
Default Value	depends on profile parameter PM
Possible Values	TRUE/FALSE
