

DDM Editor

The DDM editor is used to create, maintain and delete Natural data definition modules (DDMs).

Tip:

You can generate, print and store data reports from DDMs by using the *data browser*, which is described in the *Tools and Utilities* documentation.

The *DDM Editor* documentation is organized in the following parts:

- Principles of Operation
- Listing DDMs
- Creating DDMs
- Invoking and Terminating the DDM Editor
- Using the DDM Editor Window
- Saving and Cataloging a DDM
- Maintaining DDMs in Different Environments
- Data Conversion for Adabas or RDBMS
- Data Conversion for Tamino
