

Data Area - Local, Parameter

Accessible Using

1. "Dialog > Parameter Data Area/Local Data Area"; or
 2. CTRL+ALT+P/L, or (for LDA's) by selecting 'Local Data Area...' from the dialog's context menu.
-

Purpose

Enter inline data definitions for a dialog. In a parameter data area, you must include all the parameters that you want to be passed on to the current dialog in an `OPEN DIALOG` or `SEND EVENT` statement. In a local data area, you must include all the user-defined variables or other variables that you want to use in an event handler code section or a subroutine of the current dialog. Note that the dialog editor automatically generates the data definitions for the dialog elements.

The "Using" button opens a dialog box that allows you to include existing inline data definitions.
