

RDACTIVE - Activate Remote Debugger

This Natural profile parameter specifies whether a remote debugger on a Windows computer is to be used or not. RDACTIVE is only relevant if the system command DEBUG has been used. It is used in combination with the profile parameters RDNODE (where the relevant node name is specified) and RDPOR (where the port number is specified).

Possible settings	ON	Remote debugging is enabled. For DCOM (Windows only) or RPC servers, the remote debugging session is opened automatically.
	OFF	Remote debugging is not possible. It is possible, however, to use the debugger integrated in Natural Studio.
Default setting	OFF	
Dynamic specification	yes	
Specification within session	no	

Note:

See the *Debugger* documentation for further details.
