EMU - Unicode Edit Mask

With this session parameter, you can specify a Unicode edit mask for an input and/or output field that is used in a `DEFINE DATA`, `DISPLAY`, `INPUT`, `MOVE EDITED` , `PRINT`, `PROCESS PAGE` or `WRITE` statement.

Possible settings		See below.
Default setting	none	
Applicable statements		

	`DEFINE DATA`
	`DISPLAY`
	`INPUT`
	`PRINT`
	`WRITE`
		Parameter may be specified at element level.

	`MOVE EDITED`	Parameter may be specified at element level.
Applicable command	none	

The syntax of the session parameter `EMU` is identical to that of the session parameter `EM` (see `EM` syntax).

See also *Unicode Edit Masks - EMU Parameter* in the *Programming Guide*.

Edit masks which are defined with `EMU` are kept in Unicode format so that the content is independent of the installed system code page.

For further information and an example, see also *Unicode and Code Page Support in the Natural Programming Language*, *Session Parameters*, section *EMU, ICU, LCU, TCU versus EM, IC, LC, TC*.
