TRACE - Define Trace Level for Natural RPC Servers

This Natural profile parameter activates the RPC trace facility and determines the trace level *n* to be used. For further information, see *Using the Server Trace Facility* p.p. in the *Natural Remote Procedure Call (RPC)* documentation.

TRACE is specified on the server side only.

| Possible settings | 0 | Nothing is traced. |
|------------------------------|-------|--|
| | 1 | Only messages (inclusive Natural errors) are traced. |
| | (1,E) | Messages are traced in the event of an error only. |
| | 2 | All messages and data from/to client are traced. |
| | (2,E) | Messages and data from/to client are traced in the event of an error only. |
| Default setting | 0 | |
| Dynamic specification | yes | |
| Specification within session | no | |

The values 3 - 9 displayed in the selection box of the Configuration Utility are also accepted. These values are for future use and behave like TRACE=2.

For further information see the Natural Remote Procedure Call (RPC) documentation.
