

Known Issues

This chapter provides additional information that you should be aware of after having installed Natural.

Terminal Command %=

If the background color of a window is changed with the terminal command %=, this will now also change the background color of the text constants. In earlier versions, the background color of text constants was not changed which caused an uncommon color layout.

Installation of Predict with Natural

It is not possible to install Predict Version 4.4.1 or 4.5.1 with Natural Version 6.3 by executing the file *setup.exe* from the Predict CD. It is recommended that you start the Natural Installer (SYSINST) to install Predict.
