Function

The statement `CLOSE WORK FILE` is used to close a specific work file. It allows you to explicitly specify in a program that a work file is to be closed.

A work file is closed automatically:

- When command mode is reached.
- When an end-of-file condition occurs during the execution of a `READ WORK FILE` statement.
- Before a `DEFINE WORK FILE` statement is executed which assigns another file to the work file number concerned.

Syntax Description

Syntax Element	Description
<code>work-file-number</code>	The number of the work file (as defined to Natural) to be closed.
