

# MAIL

MAIL	[	{	*	}	]
		{	?	}	]
			<i>mailbox-id</i>		]

This command is used to invoke a mailbox which is a kind of "notice board" used to broadcast messages under Natural Security. The contents and/or expiration date of the mailbox can be modified.

<b>MAIL</b>	If you enter the MAIL command without any parameters, a window is displayed prompting you to enter a mailbox ID.
<b>MAIL *</b>	A list of all mailboxes you may use is displayed, and you may then select a mailbox from the list.
<b>MAIL ?</b>	
<b>MAIL</b> <i>mailbox-id</i>	If you specify a <i>mailbox-id</i> (maximum 8 characters), the corresponding mailbox is invoked directly. The <i>mailbox-id</i> must have been defined in Natural Security.

For further information, see *Mailboxes* in the *Natural Security* documentation.
