

UNMAP

The UNMAP command enables you to perform the following functions, using the Natural command line:

- Unmapping the Currently Active Environment/Application
- Unmapping a Natural Development Server Environment
- Unmapping a Natural Application

To map a Natural Development Server or a Natural application, you can use the system command MAP or the dialog described in *Mapping/Unmapping an Application* in the *Remote Development Using SPoD* documentation.

Unmapping the Currently Active Environment/Application

The following command syntax applies if you want to unmap the currently active Natural Development Server environment or Natural application:

```
UNMAP
```

Unmapping a Natural Development Server Environment

The following command syntax applies if you want to unmap a Natural Development Server environment:

```
UNMAP ENVIRONMENT=environment-name
```

Where *environment-name* is the alias name of the connection. If the environment name contains blanks, it must be enclosed in single quotes ('...').

Unmapping a Natural Application

The following command syntax applies if you want to unmap a Natural application:

```
UNMAP APPLICATION=application-name
```

Where *application-name* is the name of the application to be unmapped.
