

# UNREGISTER

$\text{UNREGISTER } \left\{ \begin{array}{l} \textit{class-module-name} \\ * \end{array} \right\} \left[ \left[ \left\{ \begin{array}{l} \textit{library-name} \\ * \end{array} \right\} [\textit{server-id}] \right] \right]$
--

Related command: REGISTER.

This command is used to unregister Natural classes.

For further information, see *The UNREGISTER Command* in the *Administrating NaturalX Applications* part of the *Operations* documentation.

**Note:**

Under Natural Security, this command can only be called for a single library. This means the library name has either to be omitted or a specific library has to be used. It is not possible to use an asterisk (\*).
