

# %K and %KP - Simulate PF- and PA-Key

These terminal commands can be used to simulate the terminal function (PF, ENTER) and program attention (PA) keys.

Command	Function
<code>%Knn</code>	<p>Simulates the terminal function key numbered <i>nn</i> (PF1 to PF99). This permits PF-keys 13-24 to be assigned to PF-keys 1-12, or the activation of PF-keys not available on the keyboard used.</p> <p>This terminal command also makes function keys available in batch mode.</p>
<code>%K0</code>	Simulates the ENTER key.
<code>%KPn</code>	Simulates the program attention key numbered <i>n</i> (PA1 to PA3) (see <code>%Knn</code> ).
