

Object Specification

For the unload, load and scan functions, the Object Handler provides a selection window where you can select the types of object to be processed or specify a Workplan of the type SELECTION or LIST.

For each type of object selected, you are provided object-specification windows. These windows are used to specify selection criteria for the objects to be processed.

This section describes the options provided in the individual object-specification windows.

- All Objects
- Natural Library Objects
- Natural System Error Messages
- Natural Command Processor Sources
- Natural DDMs
- Natural-Related Objects
- External Files
- FDTs
- Use Selection or List
