1. Installation
===============
Natural Security 9.1.1 is based on the functionality of the related
Mainframe (8.2.6) Version.

The installation of Natural Security Version 9.1.1 PL 0 requires Natural
Version 9.1.1 PL 0.
Before you begin to install Natural Security using the Software AG
Installer,
read the sections below which are included in the Natural Installation
documentation.

1.1. FSEC Database Definition
=============================

The Natural Security FSEC must be an Adabas database. This is defined in
the Global Configuration File, DBMS Assignments, with TYPE=ADA for the
FSEC DBID. With the Natural Configuration Utility you may manually make
this entry for your FSEC DBID, or it will be entered automatically during
the configuration of Natural Security. For further details, see section
'Setting Up the FSEC System File for Natural Security'.

1.2. Completing the Installation

After you have installed Natural or Natural Security, you need to set up a number of parameters and individual settings depending on your environment. To do so, you invoke the SYSPCI (Product Configuration and Initialization) utility. For further details, see section 'Configuring the Installed Products with the SYSPCI Utility'.

1.3. Setting Up Natural Security

If you have completed the Natural Security installation and if you have installed the full version of Natural Security for the very first time some further steps are required, read section 'Setting Up Natural Security'.

If you have completed the Natural Security runtime installation, no further steps are required.

1.4. Uninstall

Once it has been set up, Natural Security cannot be removed from a Natural installation. In order to remove Natural Security, you must uninstall Natural completely. For further details, see section 'Uninstalling Natural'.

2.   Changes and Enhancements

The LOGON message "NAT1691 Your password will expire on .." is enabled again.

The Natural utilities SYSMAIN and MAINUSER support the Natural Security option 'Library FDIC Assignment Enabled'.

See 'Release Information for Natural Version 9.1.1' section 'Natural Security'.

3.   Known Issues

For the list of solved problems see the READ_NSC.FIX.

4.   Restrictions

5.   Documentation Changes

See 'Release Information for Natural Version 9.1.1' section 'Natural Security'.
